TECHNOLOGIES

Languages: HTML5, CSS/SASS, Javascript, Python, C#

FrameWorks/Libraries: React, ASP.Net, Flask, Jinja, Razor, Bootstrap

Databases: MySQL, NoSQL

Tools: GitHub, Balsamiq, Figma, EF Core, API integration, JSON, Bcrypt, OOP, jQuery, Gradle, Postman

SOFTWARE PROJECTS

Cravelt– Github (live coming soon)*

Recipes and nutrition tracking website

- JQuery library to speed up the front-end development process and enhance user experience. Improved readability and create simplified code.
- REST API consumption with Axios promise-based HTTP client to speed up the back-end development process by outsourcing data. Tested with Postman API platform.
- React reusable components to create consistency and reduce lines of code, Increasing readability. Virtual DOM improves site's performance, increasing speed.

TECHSTACK: HTML, CSS, JavaScript, React, API, Bootstrap

CyberPet – Github (live coming soon)*

Mobile Creature Companion

- Developed and implemented C# scripts dictating creature behavior and handling user interactions.
- Collaborated using Github for source control and thorough development documentation..
- Prototyped using Gradle for debugging and testing deployed to smartphones.

TECHSTACK: C#, Unity, Github, Gradle

Only Cats – [Github](#)

Cat Photo Sharing Website

- Deployed through AWS for security, scalability, and accessibility of the website.
- MongoDB NoSQL for database flexibility and scalability, saving time throughout the development process.
- Bootstrap to shorten front end development time and reduce code written. More readable and concise.
- Balsamiq low-fidelity wireframes for front-end consistency and clarity.

TECHSTACK: HTML, CSS, React, NoSQL, Bootstrap

WORK HISTORY

Driving Instructor/Certified Examiner – Defensive Driving School

June 2021-June 2022 | Seattle, WA
